# 1. INTRODUCTION

---

In a digital age where most of us cannot imagine their daily lives without a computer and Internet connection, there are 18% of Europeans (close to 90 million people), who have never used the Internet (Eurostat, 2014). In addition, according to the Digital Agenda Scoreboard 2014 47% of the EU population have insufficient digital skills, 23% has none at all. The picture is even gloomier among disadvantaged people (aged 55-74, low educated, unemployed, retired or inactive) of whom 64% have an insufficient level of digital skills and 38% have no digital skills. These numbers speak for themselves when it comes to explaining the key role of educational staff, or so called eFacilitators, working in telecenters (public ICT access and training centers) in increasing social inclusion, employability and active citizenship.

eFacilitators in Europe cover many different realities – they work in ICT training centres, NGOs, libraries, municipalities, to name a few. This is why these guidelines have been designed in order to allow users to adapt them to their local context, for instance in defining the recognition path by choosing between VET and higher education.

The idea with which Telecentre Europe developed these guidelines was to give a tool in the hands of its members and other interested organisations, which can serve them as a starting and reference point in ‘fighting’ for the professional recognition and development of eFacilitators. TE wished to empower its members and increase their capacities to advocate for the formal and social recognition of the eFacilitator as a new professional profile, either under the framework of another occupational field, or as a stand-alone occupation that deserves its place in professional catalogues.

# 1. INTRODUCTION

---

Since 2009 several pioneer projects focusing on the development of training materials for eFacilitators have been realized with the participation of a number of Telecentre Europe members. In Chapter 2 of this documents we tried to acknowledge all organisations that made these projects possible and laid the first (and second) stones in this new endeavour. Today, TE counts with 50 member organisation from all over Europe and as the network uniting these organisation under the same umbrella, we realised that it is our duty to collect these experiences and make them available in a structured and easy-to-navigate document so that our members can take on from here and build on what has been achieved so far, instead of having to reinvent the wheel every time. These projects have produced modular training curricula for eFacilitators that have been piloted and transferred to more countries. Curricula are constantly enriched with new modules and constitute an invaluable resource for every organization wishing to build the skills and capacities of its telecentre staff.

Chapter 3 sets the policy background and explains why professionalization is beneficial for the sector. It also provides useful tips for activist organisations on the national level on how to design an advocacy strategy according to the recognition procedures in different countries. The document does not aim to prescribe a one-size-fits-all strategy, but to equip interested organisations with the necessary background information so that by following the simple steps in the Case Study Guide, they can design the most appropriate and effective strategy.

The complete list of the training modules developed so far is found in Chapter 4, with links and references to the training resources, as well as the projects under which they were developed. This is a unique stocktaking exercise aiming at valorising the existing experience and serves as a one-stop-shop for all organisations that would otherwise duplicate these efforts. In the last section, TE outlines its intentions and vision on how these guidelines will be further developed and disseminated.

## 2. ACKNOWLEDGEMENTS

---

**T**hese Guidelines are an initiative of Telecentre Europe AISBL funded by Erasmus+ programme.

**T**elecentre-Europe AISBL – a not-for-profit International Association - inclusively supports the network of European Telecentre organisations by fostering knowledge sharing and learning amongst its members. It actively promotes eFacilitator.

**T**elecentre Europe **acknowledges in this section the contribution** all the participant organisations to the different projects that have helped us to create a collective corpus of training resources and other materials for the professionalisation and training of eFacilitators.

ICT Development Bulgaria (ICTD Bulgaria) has been created by professionals in the fields of program management, education, innovation and research as a non-for-profit institution stimulating the uptake of Information and Communication Technologies (ICTs) in Bulgaria.

The activity of ICTD Bulgaria is primarily focused on designing and implementing research and project initiatives in the area of raising social awareness about the benefits of information society through aggregation and providing access to innovative broadband solutions, applications and ICT-based content to different target groups (citizens, community networks, local administration and SMEs).

A major goal of the organization is to use the accumulated strategic expertise of its members in the elaboration, realization and distribution of digitally-enhanced training programs and methodologies for improving the professional competencies and fostering the adaptability of adult workers to the conditions of the market.

Since its creation in 1988, Interface3 has worked to expand the range of professional opportunities available for women, and to improve their qualifications in ICT.

The Interface3 courses are aimed at women who want to improve their professional life, reintegrate or shift towards growth sectors (women seeking employment, long-term unemployed, women 'returners'). These programs focus on ICT but also on other requirements of today's businesses: project management, knowledge of languages, etc.

Today the digital divide between men and women is gradually reducing because of better access and usage of ICT. Yet there are less than 20% of female working as ICT professionals.

**T**he Foundation was established in 1992 with the support from the International Youth Foundation. We are a non-profit organization and we do not carry out economic activity. Our financial resources come mainly from grants and contributions received from institutions and individuals. Our aim is to stimulate comprehensive development of children and youth aged between 5 and 20 years. We wish to help in raising a new generation of responsible and creative people, who actively build their own lives and local community, and thus, the future of our

country and of the whole world. We want to be present everywhere where individuals and organizations caring for children and youth need financial, organizational and educational support or else, where they need a liaison with institutions and organizations in Poland and abroad. We award financial grants and organize training courses for representatives of local authorities and non-governmental organizations or leaders of informal youth groups, as well as conferences and seminars which discuss their problems. We carry out training programs for primary and maternal school teachers which teach them new methods or working with young people. From 1992 until the end of 2009 we have awarded 4219 grants of a total of PLN 41,645,600. Each year, we help over 200,000 children and young people.

ISTITUTO  
GUGLIELMO TAGLIACARNE

per la promozione  
della cultura economica

Istituto Guglielmo Tagliacarne (IGT) has been set up by the Union of the Italian Chambers of Commerce in 1986. It is a foundation formally recognised by the Italian Ministry of Industry. The Institute operates in all the Italian regions to promote economic culture, with a special focus on local economies, by undertaking activities of research and training.

The transnational experience of the Institute has been developed both in socio-economic research (with a focus on local development systems and on learning dynamics) and in training (with a special focus on pilot projects for SMEs, training for trainers, analysis of competencies, especially within Leonardo da Vinci and Equal programmes). Among the most relevant transnational projects it must be mentioned the four-years project (2001-2005) “WEST EAST ID” - Industrial Districts’ Re-location Processes Identifying Policies in the Perspective of EU Enlargement”.

The Institute has developed a large know how in non formal learning developed by action- learning methodologies mainly involving local authorities and SMEs’ groups.

## 3. FORMAL & SOCIAL RECOGNITION

### 3.1. eFacilitator as a profession

#### Why eFacilitators?

**R**ecent years have seen a constant rise in requirements towards educational staff working in telecentres. Telecentre staff meets challenges like reduced public funding, new labour market demands for employability concerning ICT qualifications and changing technological systems (tablets, cloud applications, apps). On the other side, end users are requesting new services (mobile devices, certification of competences) and new target groups (higher participation rates of people with disabilities or unemployed youth) are entering the digital world and face competence gaps. These developments lead to a demand for professional occupational training for educational staff of telecentres.

**T**he authors have been involved in a strand of four EU financed development projects (Lifelong learning programme, 2011-2014) aiming at supporting the professionalization of telecentres, their services and staff. One of the outcomes was the branding of the profile of the “eFacilitator” as an occupational profile of educational staff for ICT competences in telecentres. Our research in 2012<sup>1</sup> indicated that eFacilitators show a high formal education, predominantly in the educational or social field. Nevertheless, one of the highest demands of eFacilitators articulated in our survey in 2012 was the request for occupational training. As many eFacilitators have an educational or social professional background, requested training topics aim at ICT knowledge (“network administrator”, “ICT security”) or managing skills (“running a learning place”, “fund raising”). Job guidance for unemployed is a rising field of activities for eFacilitators, too.

**A**s a result of these challenges, the projects “Vocational training and education solutions for e-Facilitators for social inclusion (vet4e-I)” and “Training for e-facilitators (TeF)” were funded by the EU Commission in order to support activists and researchers in touch with Telecentre Europe to develop training materials for eFacilitators.

### 3. FORMAL & SOCIAL RECOGNITION

#### 3.1.- eFacilitator as a profession

Two other projects were issuing another challenge: The development of professional learning material and an adequate learning methodology for telecentres.

| Project name      | Intergenerational learning circle for community management ("eScouts")                              |
|-------------------|---|
| Funding provided  | EU, Lifelong learning programme, 2011-2012.   |
| URL               | <a href="http://escouts.eu/">http://escouts.eu/</a>   |
| Research question | Which pedagogical approaches are useful for mediating digital skills to marginalised target groups? |
| Main outcomes     | Learning approach for intergenerational peer support for digital inclusion.                         |

| Project name      | Key Competences for all (KC4all)  |
|-------------------|---|
| Funding provided  | EU, Lifelong learning programme, 2009-2011.   |
| URL               | <a href="http://www.keycompetences.eu">http://www.keycompetences.eu</a>   |
| Research question | Which learning content should telecentres offer their target groups?  |
| Main outcomes     | Learning material for disadvantaged persons, facilitators' handbook, guidelines for stakeholders and policy makers. |

## 3. FORMAL & SOCIAL RECOGNITION

---

### 3.1. eFacilitator as a profession

Taking these developments into account, the occupational field of the eFacilitator and the professional environment of the telecentre can clearly be described as a working place in ongoing professionalization. Telecentres and eFacilitators are aiming at more and better occupational training, improved routines, increased sustainability of the delivered services and a clear definition of the telecentre as an inclusion instrument and working place.

## 3. FORMAL & SOCIAL RECOGNITION

### 3.2. Recognition processes

#### Why recognition?

In order to support and sustain this process of professionalization, the recognition of the occupational profile of the eFacilitator is one important building block. Recognition has several meanings which all are aiming at higher professionalization of the profile and sustainability of learning processes:

**1** Recognition of the occupational profile will raise the attractiveness of this occupation and attract highly skilled persons for this job.

**2** A better recognition of this profile will assure better job options for eFacilitators, supporting their employability and the attractiveness of the whole occupational field of ICT based learning and digital inclusion. Working experience as an eFacilitator may be recognised for higher education or other jobs.

**3** The recognition of eFacilitators will also improve the recognition of clients who received training in telecentres.

**4** A better recognition of eFacilitators will raise attention for telecentres as a welfare system instrument, high lightening the function of this instrument as a learning and inclusion space in modern (digital) societies.

**5** Recognition of the profile and professionalization of telecentres could also support the internationalisation of this movement: With many telecentres operating locally and many networks aiming at a regional or national context, the European exchange of ideas, approaches and instruments could support the professionalization and contribute to impact, sustainability and attractiveness of this sector.

## 3. FORMAL & SOCIAL RECOGNITION

---

### 3.2. Recognition processes

#### Why recognition?

**F**ollowing these aims, two pathways of recognition are viable:

**1** Formal recognition refers to competent bodies issuing a certificate (like a university degree or a vocational training certificate). One has to differ between official certificates issued by competent bodies (like a university, a governmental body or and educational agency acknowledged by the education authorities) and certificates issued by non official bodies (like a private training institute or IT companies<sup>2</sup>). Formal recognition refers to certificates issued by public bodies or their agencies, as these have the higher relevance in this sector. The path for formal recognition is through administrative procedures; instruments are supporting documents and negotiations.

**2** Social recognition means the awareness of the public or special interest groups (like employer organisations or enterprises) for an occupational profile. This awareness is an important building block of formal recognition, as formal recognition normally follows educational needs, expressed in target groups' awareness towards a need. The path for social recognition is through public awareness; instruments are campaigns and promotion.

---

<sup>2</sup> In the ICT sector certificates issued by private companies – like those issued by Microsoft or Oracle – have an important meaning for employability. Nevertheless this document only focusses on formal recognition issued by governmental bodies or their agencies.

### 3. FORMAL & SOCIAL RECOGNITION

#### 3.2. Recognition processes

| Term                             | Explanation   |
|----------------------------------|---|
| Recognition of learning outcomes | <p>(a) Formal recognition: the process of granting official status to skills and competences either through the:</p> <ul style="list-style-type: none"><li>▪ award of qualifications (certificates, diploma or titles); or</li><li>▪ grant of equivalence, credit units or waivers, validation of gained skills and/or competences;</li></ul> <p>and/or</p> <p>(b) Social recognition: the acknowledgement of the value of skills and/or competences by economic and social stakeholders.</p> |
| Source:                          | Cedefop (2008): Terminology of European education and training policy. A selection of 100 key terms.  |

## 3. FORMAL & SOCIAL RECOGNITION

### 3.2. Recognition processes

#### How to reach formal recognition?

**A**s there is no such thing as a “European recognition model” guiding a central profile compulsory through all member countries (like EU law transformed in national laws), each national activist has to foster the recognition in their national or even regional context on their own.

**T**he authors have accompanied several recognition processes in various countries<sup>3</sup> and sectors and have developed an approach that is valid as a guiding structure for most countries: The case study guide on recognition (see chapter 4). It is not elaborating on national specifications or administrative details, but assists the activist by guiding him through questions that the activist has to answer in order to achieve formal recognition of the eFacilitator profile. It is important to understand acquiring formal recognition is a complex and time consuming process that could last several years and that needs strong support from several stake holders. In all countries we have been working so far formal recognition is following some align procedures:

**1** Most countries are differing between higher education (unsing the ECTS system) and vocational training systems (using the ECVET system). Both are following other approaches and can not be mixed. The first decision to take is: Do you imagine eFacilitators being trained at a university or in the vocational training system - eventually as initial or further training?

**2** It is important to understand the procedure that leads towards a formal recognition. First thing to do on a pathway for formal recognition is to read documentation about this procedure (either in the higher or vocational training system). It should be available via the national or regional education ministry.

<sup>3</sup> As per e-Facilitator recognition: Portugal, Spain, Italy, France, Germany, Bulgaria, Latvia

## 3. FORMAL & SOCIAL RECOGNITION

### 3.2. Recognition processes

**3** Another important fact is to understand that formal recognition is built on several actors – like ministry of education, ministry of labour, research institutes, labour unions and employer organisations or university faculties. In most countries all these actors have to be “on board” and actively support the formal recognition. Active moderation of those actors’ intentions is key for a fast formal recognition.

**4** Social recognition (by the fore named actors or a broad public) is a great stepping stone for formal recognition. One can argue “many organisations want to support this process”.

**5** A labour market analysis is another initial stepping stone. A study should quantify the number of persons and organisations who have interest in the new occupational profile. This study should also describe the state of the art of education in this occupational field: Which profiles are already available? By whom? Where is the need for an eFacilitator profile?

**T**he case study guide on recognition (see chapter 4) asks all these questions. It is a simple tool to make sure the activist is aware of the “big picture” of recognition and asks himself the right questions. There is no “right or false” to these questions, but it is important to reflect on all of them and sketch a pathway to recognition before taking any concrete steps.

## 3. FORMAL & SOCIAL RECOGNITION

### 3.3. Understanding the "European Education Area"

The European Union wants to create a "European Education Area" to facilitate the transparency/ comparability and standardised documentation of qualifications in order to increase professional mobility of European citizens. A comprehensive system is set up to facilitate the comparability and mutual recognition of qualifications between EU member states and to foster lifelong learning. Its core element is the EQF, the European Qualifications Framework with eight levels of achievement, acting as a common reference framework for all national education systems in Europe. There are basically two approaches to measuring and certifying educational performance,

- learning input (usually the time invested in learning plus proven performance) and
- learning outcomes (what a learner knows, understands and is able to do).

For the Higher Education area (EQF levels 5-8), the accreditation of learning investments has been developed with ECTS (European Credit Accumulation and Transfer System) leading to the introduction of Bachelor and Master programmes ("Bologna process"). According to ECTS one credit point corresponds to a workload of 25-30 working hours. ECTS is an input and outcomes based system.

## 3. FORMAL & SOCIAL RECOGNITION

### 3.3. Understanding the "European Education Area"

In the area of vocational education and training (EQF levels 1-4), the ECVET system (European Credit System for Vocational Education and Training) aims to establish the recognition of learning outcomes on a European level. Learning outcomes are statements of what a learner is supposed to know, understand and be able to do at the end of a period of learning. The certificate requested does not state "what a student should be able to do, but what he/she can do according to exams passed."

| Term  | Explanation  |
|---|--|
| <b>European credit system for vocational education and training (ECVET)</b> | <p>A device in which qualifications are expressed in units of learning outcomes to which credit points are attached, and which is combined with a procedure for validating learning outcomes. The aim of this system is to promote:</p> <ul style="list-style-type: none"><li>▪ mobility of people undertaking training;</li><li>▪ accumulation, transfer and validation and recognition of learning outcomes (either formal, non-formal or informal) acquired in different countries</li><li>▪ implementation of lifelong learning;</li><li>▪ transparency of qualifications;</li><li>▪ mutual trust and cooperation between vocational training and education providers in Europe.</li></ul> <p><b>Comment:</b> ECVET is based on the description of qualifications in terms of learning outcomes (knowledge, skills and/or competences), organised into transferable and accumulable learning units to which credit points are attached and registered in a personal transcript of learning outcomes.</p> |
| Source:   | Cedefop (2008): Terminology of European education and training policy. A selection of 100 key terms  |

## 3. FORMAL & SOCIAL RECOGNITION

### 3.3. Understanding the "European Education Area"

**A**s both systems refer to a different understand of what to recognise, an early decision is necessary: Which pathway does the eFacilitator profile have to go? Is it a higher education profile (addressing universities) or a vocational education profile?

**T**his decision does not only depend on the level of the training addressed; the existing national education system where the eFacilitator profile should be installed should also be considered. Some countries build on a strong vocational system for initial occupational training (like Germany, Austria or Denmark) in other countries higher education bodies play the dominant role in initial occupational training (like Poland, Romania or the UK). Sometimes the decision for the pathway is sector dependant, as in some countries service training or technical training are addressed by one or the other system. There is no decision valid for all European countries – as a result the first step for a national recognition of a national eFacilitator profile should be to identify the appropriate education system.

### 3. FORMAL & SOCIAL RECOGNITION

#### 3.4. Case Study guide

|                    |     |             |         |
|--------------------|---|-------------|---------|
| Nr                 | Issue   | Information | Comment |
| Formal recognition |   |             |         |
| 1                  | Do you want to place the eFacilitator profile within the higher education (ECTS) or vocational training (ECVET) pathway? Which is more relevant to the labour and education market? Which will employees and employers favour? Please elaborate on this topic. Please indicate the pathway (or pathways) (higher education or vet) you favour. Please answer the following questions in accordance to the pathway (or pathways) (higher education or vet) you favour. |             |         |
| 2                  | Which Ministry or other state authority is competent for formally recognising a certificate?  |             |         |
| 3                  | If existing, please describe the formal procedures of recognition (accreditation, registration) of courses or any sort of certificate granted by a course in your country. If given, please describe also the different stages of the pathway of recognition.   |             |         |

### 3. FORMAL & SOCIAL RECOGNITION

| 13                 | Which means (e.g. leaflets, presentations of conferences, journal articles etc. do you think are appropriate to reach these target groups?  |             |         |
| 14                 | What could be “buying arguments”? for them?   |             |         |

## 4. TRAINING CURRICULUM

---

### 4.1. Why an European training curriculum

The job “ICT facilitator” has been widely spread throughout the world since the first telecentre networks were established when expiring the past century, as a strategy to overcome the digital divide.

These telecentres or ICT spaces are not just premises kitted out with machines, which are automatically operated. They are also places for enabling processes of empowerment in the use of technologies for citizens who are approaching them with very different needs and who use ICT as a means to acquire new competences either to solve problems or to ease their access to the job market.

This empowerment processes unavoidably requires the intervention of a professional: the telecentre’s facilitator (eFacilitator) who takes on a bridge role between technology and people, highlighting the positive and beneficial use of technologies. It is therefore an essential role without which the ICT space would not make sense.

This specific professional profile does not fall under the existing professional profiles within national catalogues. On the one hand, the technological aspect would suggest a need for a professional with a computer science degree. On the other hand, the educational and facilitation aspect requires a profile that would be closer to teaching, or even better, social education. Consequently, one should think of a multidisciplinary profile with a great capacity to adapt to changes and to the wide variety of situations and needs that the general public request from an ICT space.

## 4. TRAINING CURRICULUM

### 4.1. Why an European training curriculum

It is also obvious that this job and professional role has been around for at least fifteen years and it is not sufficiently regulated, which generates great differences in the social and professional recognition of the people who carry it out.

In Spain, Fundació Esplai has been developing specific training projects to cover the prevailing educational and professional gap for this profile. Through various programs and with the collaboration of the Professional Qualifications Institute of the Catalan Government, a good number of initiatives have been carried out to define this profile in terms of job description, competences, and the training needed to acquire these competences. Through this program, six professional competence units have been established:

- **CU 1:** To manage financial resources and infrastructure and manage the team of the ICT space.
- **CU 2:** To manage and maintain the technological resources of the ICT space.
- **CU 3:** To define and carry out policies and programs of public relations in the ICT area.
- **CU 4:** To manage communication in the ICT area, with and between users and the daily operations of the space.
- **CU 5:** To carry out the activity of the ICT area independently or in teams.
- **CU 6:** To train the internal and external users of the ICT space.

These six competence units provide a comprehensive description of the job and the tasks it involves.

There is also a description of the productive sectors in which this job can be performed, a professional area not limited to the telecentre itself:

## 4. TRAINING CURRICULUM

---

### 4.1. Why an European training curriculum

“

Its cross-sectorial feature, resulting from the need of every type of company and organization to treat and manage its information and to count on qualified staff to do so, is placed in all the sectors of the entrepreneurial factory. They are particularly present in spaces managed by entities and administrations to favor the use, learning, and appropriation of ICT.

”

## 4. TRAINING CURRICULUM

### 4.1. Why an European training curriculum

Finally, a description of the necessary learning units (Learning Modules) to acquire these competences as well as the number of hours required for each of them has been developed.

- **LM 1:** Resources and professional team of the ICT space. (90 hours)
- **LM 2:** Technological resources of the ICT space. (60 hours)
- **LM 3:** Programming outreach and promotion of ICT and space communication environment. (90 hours)
- **LM 4:** Communication and action in the ICT area. (120 hours)
- **LM 5:** Planning, scheduling and execution of the activity of the ICT area. (120 hours)
- **LM 6:** Training in the ICT area. (120 hours)

Taking into consideration the work carried out in Spain, the level of qualification for this professional profile according to the European Qualifications Framework (EQF), would correspond to level 5, which is a Higher-level vocational training. This matches the reality, which indicates that around 70% of professional facilitators in Spain have that level or higher (university graduates).

In addition, and within the European context, the difficulties in getting an officially approved common profile prevent the execution of joint educational actions as well as the free circulation of professionals between countries, and as a consequence, it is impossible to create a genuine exchange of knowledge and experiences, which would result in an increased effectiveness of the tasks carried out by ICT spaces in Europe.

Reality also shows us that there is very little permeability between the national networks and organizations. While there is contact between networks' leaders through organizations like Telecentre Europe, such contact does not exist on an operational level, with the people that drive the telecentres in each country.

The existence of a recognized professional qualification for European facilitators across Member States, supported by a consolidated European training curriculum to develop the role would enable the creation of common training spaces; it would strengthen the networks and allow the free circulation of professionals. This is a first stone towards the consolidation of a training curriculum of reference for eFacilitators in Europe.

## 4. FORMAL & SOCIAL RECOGNITION

### 4.4. List of modules recommended to develop in the future

The majority of actions developed through European funded projects for vocational education and training have in their foundation the contribution of the Spanish reality, well connected with the realities of other places around the world and with strong regional telecentre networks.

Currently, the Spanish Telecentre Academy is very active and has been training Spanish facilitators for 10 years. The academy's training action has contributed to regulating the professional action, defining boundaries and opening new paths to adapt to the ever-changing realities of ICT. In all these years there has been a shift from training in digital literacy to training for social innovation and mobile technology, but trainings for the management of telecentres and in relation to methodological work with specific groups, have always been present.

Here is a link to the current catalogue of training modules (in Spanish), approximately 600 taught hours:

<http://academy.fundacionesplai.org/sites/FE%20infgeneral/index.html>

Based on Spanish Academy experience, we indicate a tentative list of topics that would be worth incorporating to the catalogue:

- Developing training in all aspects of social innovation, mentoring, knowledge hybridization, design-thinking, and the new ways of participation and social expression such as e-democracy, e-management, e-health, etcetera.
- Developing educational content around mobile technology by designing methodologies to empower use amongst the population by segments (minors, elderly, especially in terms of functional diversity).
- Educational content of a more technological nature that telecentres can avail of, and generally directed at children and young people: apps development, Scratch or Arduino coding, preferably for boys and girls (Code Clubs). All of this because of its high educational potential as well as its potential for structuring organized thought.
- Developing educational content around the responsible and safe use of technologies, applications and social networks. In two directions: for the final user, and for the educator or person who is in contact with minors due to their profession (teachers, social workers, librarians).
- Training to favor the evolution of telecentres into integrators of spaces for co-working and teleworking linked with self-employment.

## 4.-FORMAL & SOCIAL RECOGNITION

### 4.4. List of modules recommended to develop in the future

**P**revious conclusions from Spanish Academy are almost identical to the ones from trainees and super-trainers that participated to the Trans-eFacilitator project concluded in 2014 that agreed on the following:

- M09 Planning a digital literacy workshop and M11 e-Safety & e-Security are the most demanded modules of the training curriculum piloted by this project.
- The most needed modules to add to the training curriculum are Managing projects and funds and Facilitating organized groups through collaborative learning methods & internet. While the first one is a good space to develop international and national networking as well as economic planning and management (skills that were poorly available in the sample), the second one might be the right container to introduce facilitation tools and techniques combined with a design thinking methodology for educators and the use of online platforms /tools to train people.
- A module on Coding/computational thinking might be worth to tackle this emerging need ad hoc, perhaps as part of a course on Facilitating Web 2.0 (third in the choice of super-trainers & national coordinators but sixth in trainees' selection). Developing educational content around the responsible and safe use of technologies, applications and social networks. In two directions: for the final user, and for the educator or person who is in contact with minors due to their profession (teachers, social workers, librarians).

**I**t would also be interesting to consider a large field of study at European level on the real and perceived needs by professional facilitators. Partial studies have been carried out several times in the cited projects and in the context of the Spanish Academy (one is expected to be carried out this year). Having this information makes it easier to fine-tune the approach given to the professional articulation of the ICT space facilitation.

## 5.-GUIDELINES EVOLUTION

---

**I**t is through the human capital that we ensure continuity of our organisational activities. eFacilitators are the natural multipliers of digital skills and the ones that know best the end-user's needs.

**F**ormal and social recognition of the eFacilitator as a specific 21st century educator profile is and will remain high in the priorities of TE and its members in the next years.

**M**ore efforts are needed for building competences of national and European actors for further professionalising the eFacilitator profile and constantly increasing the capacities of eFacilitators to meet the challenges of fast technological developments, new users' requests, changing economic and political situations.

**N**ew competences related to coding, mobile devices, validation of digital competences and online safety need to be added to the training curriculum. New projects are underway or in our pipeline and will be added to these guidelines. A dynamic online version has been created, which would be continuously updated. Therefore, these guidelines are very much a "living document".

**W**e also realise that they will be used in different circumstances and we would really appreciate your feedback re. what you want to find inside, or how they help you in your advocacy efforts! Please be welcome to send your comments to us at: [contact@telecentre-europe.org](mailto:contact@telecentre-europe.org).
