

Green at You July Newsletter Final

www.greenatyou.eu

Co-funded by
the European Union

As the **Green at You** project draws to a close, we reflect with pride on the journey we've shared. Supported by the European Social Fund, Green at You has empowered individuals and communities with the knowledge and tools to embrace sustainable practices and green skills for the future. Over the course of the project, we have collaborated across borders, developed innovative training materials, and inspired a new generation of environmentally conscious citizens. In this final newsletter, we celebrate our achievements, highlight key outcomes, and share what comes next.

Renewable
energies

Sustainable construction
and building rehabilitation

Agriculture and food
production

For those of you that missed our previous newsletters:

What is Green at you?

Green at You is a European, free and blended program where you can train in the green sector and acquire digital and transversal skills that will help you increase your chances of finding employment in the labor market through employment and entrepreneurship itineraries in 4 key subsectors: Renewable energies, Sustainable construction and building rehabilitation, Agriculture and food production, and forestry. All of them with a circular economy approach.

The training is targeted towards vulnerable groups, especially NEETs and women.

HACKATHON and Final Partners Meeting:

During the 3rd to 6th of July **Green at You** project participants from Spain, Italy, Greece and Serbia participated in the SHU Social Hackathon Umbria 2025 in Spello,

The Social Hackathon Umbria 2025 (**hashtag#SHU2025**) was organised by the European Grants International Academy (**EGInA SRL**), in collaboration with the Crowddreaming Hackadmy Lab Foligno 4D (CRHACK LAB F4D) and Screen 2 Soul.

Its aims was to develop the digital skills of young people through a preparatory training for participation in a Hackathon that intends to promote the co-creation of innovative digital solutions to support individuals and Civil Society Organisations in achieving the Sustainable Development Goals (SDGs) of the United Nations 2030 Agenda.

For Green at You project and its participants, the objective was for each pilot to nominate 4 course participants to participate where, aided by experts in the digital and green fields, they challenge each other to co-creating innovative solutions and products that can enhance and benefit individuals and the civil society at large.

Five of those innovative solutions were awarded with 4000 euros in order to kick start and support their business ideas.

1. "The Food Culture" is a women-led cooperative that combines the artisanal production of plant-based fermented foods with educational activities to promote health, sustainability, and local development.

2. Green Roots Adventures: Experience nature firsthand through interactive tree planting and guided forest (sport and rehabilitation) tours.

3. URBiNAT introduced the modular living soil: Scalable units of self-regenerating Mediterranean nature—featuring native plants, IoT sensors, fertigation, and a real-time management app.

4. CERS Esquilino-Monti is a Renewable and Solidarity Energy Community that promotes the collective production and sharing of energy from renewable sources, with a social and environmental impact in Rome's Esquilino neighborhood.

5. SustentaClic is a digital platform connecting households and building owners with green energy services — from Nature-based Solutions to retrofitting — to boost efficiency and create inclusive green jobs.

 #SHU2025

The project partners concluded the trip with the final Transnational Partners Meeting, in order to coordinate the final steps in order to close a much successful project.

As we conclude the Green at You project, we are proud to announce that participants who completed the training have been awarded microcredentials, formally recognizing their newly acquired green skills. These credentials not only validate individual learning but also support career development and mobility across Europe. We thank all our partners, participants, and supporters for making this journey a success—and for taking active steps toward a more sustainable future.
