Newsletter - October 2026

Dear Reader,

We are happy to share with you the latest updates from our journey to empower Digital Citizenship Education!

Where We Are Now

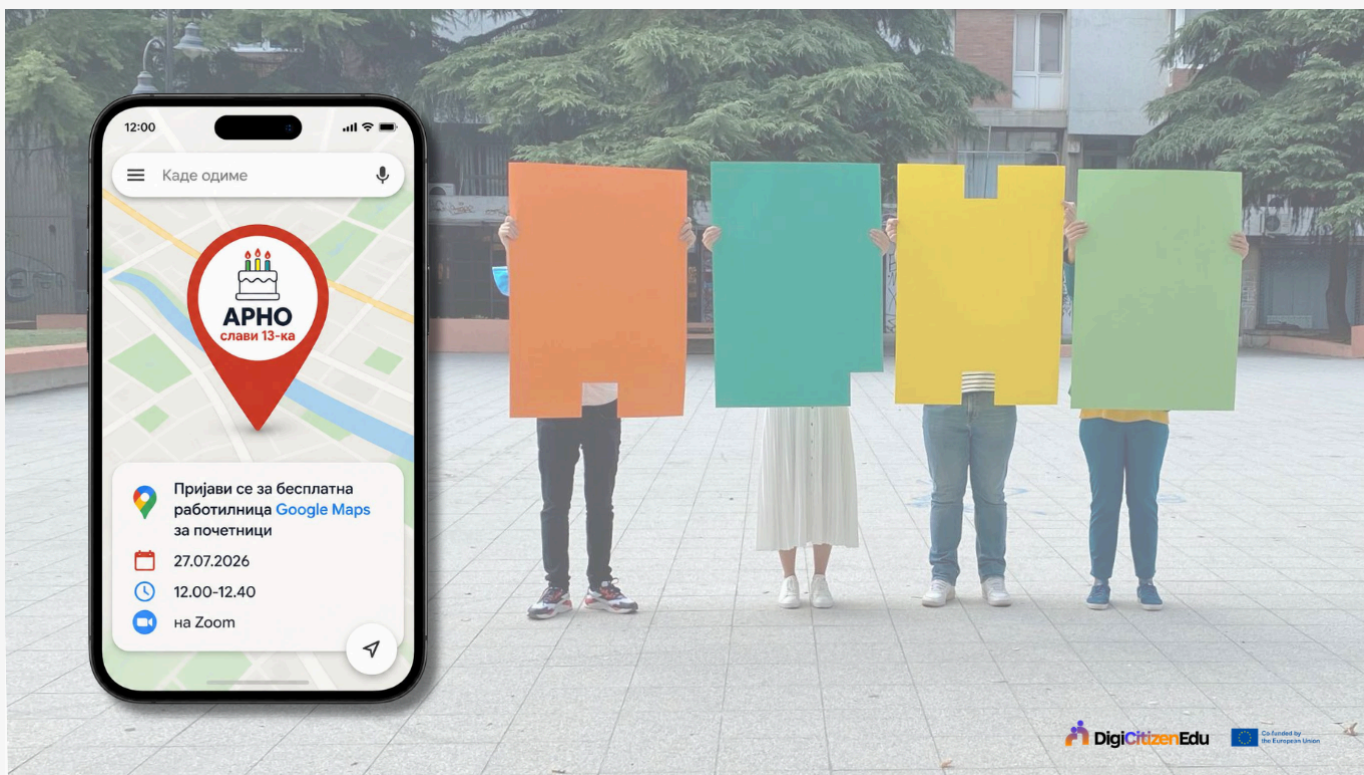

We are living in an increasingly digital world. But digital skills alone are not enough. People need to understand their rights, their responsibilities, and how to participate actively in a democratic digital society.

Right now, we are focused on developing the most important output of the project: our **training course on Digital Citizenship**, designed for all citizens. The course will comprise four modules and aims to enhance digital citizenship knowledge and skills. No prior knowledge is required. All citizens will be able to enrol in the course, which will be available on the All Digital Academy platform.

We are also preparing additional "Further Reading" materials for educators and anyone who wants to deepen their understanding of the course content. This first version of the training course will give us the opportunity to gather essential feedback from educators and learners, which will be crucial in creating the final version.

By the end of this year, we will also publish the **Digital Citizenship Compendium**, a collection of best practices in digital citizenship. It will showcase real examples of how digital citizenship is being advanced in different contexts and communities.

Google Maps for Beginners

On 27 July 2026, ARNO marked its 13th anniversary by hosting the free online workshop "Google Maps for Beginners," under the DigiCitizenEdu project. In a single Zoom session, participants learned everyday digital navigation skills - from finding directions and nearby services to reading real-time traffic and planning multi-stop routes.

"2026 started off as a tough year for ARNO; at one point, we felt like we were losing our direction. But through faith, hard work, and — fittingly — good coordinates, we're staying on the map of the civil sector. Knowing how crucial it is to have the right heading and good advice, we decided to give back by offering a free workshop on how to use Google Maps"
said Irina Janevska, ARNO co-founder.

As DigiCitizenEdu develops, ARNO looks forward to working with educators and contributing to the project's digital learning platform to bring digital citizenship skills to more communities across North Macedonia.

Our partners

Our project consortium consists of 5 organisations from Belgium, Greece, Spain and North Macedonia.

Co-funded by
the European Union
